

FEATURES

High linearity

PSRR: 105dB minimum

CMRR: 105 dB typical

Very low supply current: 20 μ A/amp maximum

1.8 V to 5.5 V single-supply operation

Rail-to-rail input and output

Low noise 2.9 μ V p-p from 0.1 Hz to 10 Hz

4 mV offset voltage maximum

Very low input bias current: 1 pA typical

APPLICATIONS

Pressure and position sensors

Remote security

Medical monitors

Battery-powered consumer equipment

Hazard detectors

GENERAL DESCRIPTION

The AD8506 is a dual micro-power amplifier featuring rail-to-rail input and output swings while operating from a 1.8 V to 5.5 V single power supply.

Employing a new circuit technology, these low cost amplifiers offer high linearity (excellent PSRR and CMRR performance) and very low bias current, while operating with a supply current of less than 20 μ A per amplifier.

This combination of features makes the AD8506 amplifier an ideal choice for battery-powered applications since it minimizes errors due to power supply voltage variations over the battery's lifetime and maintains relatively high CMRR for a rail-to-rail op amp.

Remote battery-powered sensors, handheld instrumentation and consumer equipment, hazard detection (for example, smoke, fire, and gas), and patient monitors can benefit from the features of the AD8506 amplifier.

The AD8506 is specified for both the industrial temperature range (-40°C to $+85^{\circ}\text{C}$) and the extended industrial temperature range (-40°C to $+125^{\circ}\text{C}$). AD8506 dual amplifiers are available in the standard 8-lead MSOP and WLCSP.

¹ Differential input voltage is limited to 5 V or the supply voltage, whichever is less.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

THERMAL RESISTANCE

θ_{JA} is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
